Chapter 1

Hierarchical Index

1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

AbstractStack	
Stack< T >	7

Chapter 2

Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

Stack< T >	7
--	-------------------

Chapter 3

File Index

3.1 File List

Here is a list of all documented files with brief descriptions:

Stack.hpp	11
-------------------------------------	----

Chapter 4

Class Documentation

4.1 Stack< T > Class Template Reference

Inheritance diagram for Stack< T >:

Public Member Functions

- [Stack](#) ()
- virtual [~Stack](#) ()
- [Stack](#) (const [Stack](#) &rhs)
- size_t [size](#) () const
- bool [isEmpty](#) () const
- bool [push](#) (const T &newItem)
- bool [pop](#) ()
- const T & [peek](#) () const throw (std::range_error)
- void [clear](#) ()

4.1.1 Constructor & Destructor Documentation

4.1.1.1 Stack() [1/2]

```
template<typename T >  
Stack< T >::Stack ( )
```

[Stack](#) constructor Creates a stack that will hold 100 items

4.1.1.2 ~Stack()

```
template<typename T >
virtual Stack< T >::~~Stack ( ) [virtual]
```

Stack destructor. Must delete any allocated memory.

4.1.1.3 Stack() [2/2]

```
template<typename T >
Stack< T >::~Stack (
    const Stack< T > & rhs )
```

Copy Constructor

4.1.2 Member Function Documentation

4.1.2.1 clear()

```
template<typename T >
void Stack< T >::clear ( )
```

Deletes all entries on the stack.

Postcondition

Stack contains no items, and the size of the stack is 0.

4.1.2.2 isEmpty()

```
template<typename T >
bool Stack< T >::isEmpty ( ) const
```

Determines whether this stack is empty.

Returns

True if the stack has no items, or false if not.

4.1.2.3 peek()

```
template<typename T >
const T& Stack< T >::peek ( ) const throw ( std::range_error)
```

Returns the top item off of the stack without removing it. The stack size stays the same.

Returns

Item of T that was on the top of the stack. Throws an exception of type `range_error` if the stack is empty.

4.1.2.4 pop()

```
template<typename T >
bool Stack< T >::pop ( )
```

Pops the top item off of the stack. The stack size is decreased by 1.

Returns

True if successful, or false otherwise.

4.1.2.5 push()

```
template<typename T >
bool Stack< T >::push (
    const T & newItem )
```

Pushes a new entry onto the top of the stack. Grows the stack array, if necessary.

Postcondition

If successful, `newItem` is on the top of the stack.

Parameters

<i>newItem</i>	The item (of datatype T) to be pushed on top of the stack.
----------------	--

Returns

True if insert was successful, or false if not.

4.1.2.6 size()

```
template<typename T >
size_t Stack< T >::size ( ) const
```

Returns the number of items on the stack.

Returns

The integer number of items on the stack.

The documentation for this class was generated from the following file:

- [Stack.hpp](#)

Chapter 5

File Documentation

5.1 Stack.hpp File Reference

```
#include <stdexcept>
#include "abstract_stack.hpp"
#include "Stack.txx"
```

Classes

- class [Stack< T >](#)

5.1.1 Detailed Description

ADT [Stack](#) implementation.
